## **CURRENT CLAIMS**

A copy of the claims is provided below for the convenience of the Examiner.

1. (Previously Presented) A data processor comprising:

an instruction execution pipeline comprising:

a read stage;

a write stage; and

a first execution stage comprising E execution units capable of producing data

results from data operands;

a register file comprising a plurality of data registers, each of said data registers capable

of being read by said read stage of said instruction pipeline via at least one of R read ports of said

register file and each of said data registers capable of being written by said write stage of said

instruction pipeline via at least one of W write ports of said register file; and

bypass circuitry capable of receiving data results from output channels of source devices

in at least one of said write stage and said first execution stage, said bypass circuitry comprising:

a first plurality of bypass tristate line drivers having input channels coupled to

first output channels of a first plurality of said source devices and tristate output channels

coupled to a first common read data channel in said read stage; and

a first multiplexer having a first input channel coupled to said first common read

data channel and an output channel coupled to a first operand channel of a first execution unit in

said first execution stage.

-2-

DOCKET NO. 00-BN-055 (STMI01-00055) U.S. SERIAL NO. 09/751,377

PATENT

2. (Original) The data processor as set forth in Claim 1 wherein said bypass

circuitry further comprises a second plurality of bypass tristate line drivers having input channels

coupled to said first output channels of said first plurality of said source devices and tristate

output channels coupled to a second common read data channel in said read stage.

3. (Original) The data processor as set forth in Claim 2 further comprising a first

register file tristate line driver having an input channel coupled to a first one of said R read ports

and an output channel coupled to said first common read data channel in said read stage.

4. (Original) The data processor as set forth in Claim 3 further comprising a

second register file tristate line driver having an input channel coupled to a second one of said R

read ports and an output channel coupled to said second common read data channel in said read

stage.

5. (Cancelled).

6. (Previously Presented) The data processor as set forth in Claim 4 further

comprising a second multiplexer having a first input channel coupled to said second common

read data channel and an output channel coupled to a second operand channel of said first

execution unit in said first execution stage.

-3-

DOCKET NO. 00-BN-055 (STMI01-00055) U.S. SERIAL NO. 09/751,377

PATENT

7. (Original) The data processor as set forth in Claim 6 wherein said bypass

circuitry comprises a first bypass channel coupling an output channel of said first execution unit

to a second input channel of said first multiplexer.

8. (Original) The data processor as set forth in Claim 7 wherein said first bypass

channel couples said output channel of said first execution unit to a second input channel of said

second multiplexer.

9. (Original) The data processor as set forth in Claim 8 wherein said bypass

circuitry further comprises a second bypass channel coupling an output channel of a second

execution unit in said first execution stage to a third input channel of said first multiplexer.

10. (Original) The data processor as set forth in Claim 9 wherein said second

bypass channel couples said output channel of said second execution unit to a third input channel

of said second multiplexer.

-4-

- 11. (Previously Presented)
- A processing system comprising:
- a data processor, wherein said data processor comprises:

an instruction execution pipeline comprising:

a read stage;

a write stage; and

a first execution stage comprising E execution units capable of producing data results from data operands;

. . . . . . .

a register file comprising a plurality of data registers, each of said data registers capable of being read by said read stage of said instruction pipeline via at least one of R read ports of said register file and each of said data registers capable of being written by said write stage of said instruction pipeline via at least one of W write ports of said register file; and

bypass circuitry capable of receiving data results from output channels of source devices in at least one of said write stage and said first execution stage, said bypass circuitry comprising:

a first plurality of bypass tristate line drivers having input channels coupled to first output channels of a first plurality of said source devices and tristate output channels coupled to a first common read data channel in said read stage; and

a first multiplexer having a first input channel coupled to said first common read data channel and an output channel coupled to a first operand channel of a first execution unit in said first execution stage;

a memory coupled to said data processor; and

DOCKET NO. 00-BN-055 (STM101-00055) U.S. SERIAL NO. 09/751,377

PATENT

a plurality of memory-mapped peripheral circuits coupled to said data processor for

performing selected functions in association with said data processor.

12. (Original) The processing system as set forth in Claim 11 wherein said

bypass circuitry further comprises a second plurality of bypass tristate line drivers having input

channels coupled to said first output channels of said first plurality of said source devices and

tristate output channels coupled to a second common read data channel in said read stage.

13. (Original) The processing system as set forth in Claim 12 further comprising

a first register file tristate line driver having an input channel coupled to a first one of said R read

ports and an output channel coupled to said first common read data channel in said read stage.

14. (Original) The processing system as set forth in Claim 13 further comprising

a second register file tristate line driver having an input channel coupled to a second one of said

R read ports and an output channel coupled to said second common read data channel in said

read stage.

15. (Cancelled).

-6-

DOCKET NO. 00-BN-055 (STMI01-00055) U.S. SERIAL NO. 09/751,377

PATENT

16. (Previously Presented) The processing system as set forth in Claim 14

further comprising a second multiplexer having a first input channel coupled to said second

common read data channel and an output channel coupled to a second operand channel of said

first execution unit in said first execution stage.

17. (Original) The processing system as set forth in Claim 16 wherein said

bypass circuitry comprises a first bypass channel coupling an output channel of said first

execution unit to a second input channel of said first multiplexer.

18. (Original) The processing system as set forth in Claim 17 wherein said first

bypass channel couples said output channel of said first execution unit to a second input channel

of said second multiplexer.

19. (Original) The processing system as set forth in Claim 18 wherein said

bypass circuitry further comprises a second bypass channel coupling an output channel of a

second execution unit in said first execution stage to a third input channel of said first

multiplexer.

20. (Original) The processing system as set forth in Claim 19 wherein said

second bypass channel couples said output channel of said second execution unit to a third input

channel of said second multiplexer.

-7-

DOCKET NO. 00-BN-055 (STMI01-00055) U.S. SERIAL NO. 09/751,377 PATENT

- 21. (Previously Presented) The data processor of Claim 1, further comprising a latch coupled to the output channel of the first multiplexer and to the first operand channel of the first execution unit.
- 22. (Previously Presented) The processing system of Claim 11, further comprising a latch coupled to the output channel of the first multiplexer and to the first operand channel of the first execution unit.
